- General Contractor:
Swinerton | Hunt
- Architect:
HKS Architects
- Building Type:
Post-Tensioned Concrete
- Open Date
September 2017
- Panel Type:
StoPanel Classic ci

Project Overview

Located in the heart of Denver is the 20 story 495 room dual-branded luxury lifestyle hotel - The Le Meridien and AC Hotels. These European inspired properties are located near the convention center, sports stadiums, museums, and trendy neighborhoods.

Half the building's exterior is constructed with 251 StoPanel Classic Ci Panels. The Finished Panels were constructed offsite in a climate controlled building, transported to the site and installed with the tower crane. Prefabricating the exterior with Finished Panels improved quality, safety, minimized waste, and shortened onsite construction times. The Finished Panels were installed in under 300 hours.
