

The Children's Hospital of Philadelphia Philadelphia, PA

Project Details:

- **Owner:** Children's Hospital of Philadelphia
- **General Contractor:** Turner Construction
- **Architect:** FKP Architects and Pelli Clarke Pelli Architects
- **Program (Building Type):** Hospital
- **On-site Erection Date:** 2014
- **Panel Type:** StoPanel Classic ci

Project Overview

This 339 ft. tall radius tower required a very highly aesthetic exterior wall. The StoPanel offered the architect, construction manager and owner the ability to incorporate an energy efficient, cost effective, light weight panel. All this while reducing the construction schedule with the speed of panelization.

Job Requirements

All panels were fabricated, stored and shipped from regional affiliate Jersey Panel. A tower crane was utilized for installation of the panels.

Smart Solution

This project was originally designed in precast concrete. Moving to StoPanel enabled design elements such as radius wall and heavy aesthetics to keep the project on schedule and on budget.
