

## The Cromwell Las Vegas, Nevada

### Project Details:

- **Owner:** Caesars Entertainment Corporation
- **General Contractor:** W.A. Richardson Builders, LLC
- **Architect:** Leo A. Daly
- **Engineer:** Lochsa
- **Program (Building Type):** Hospitality
- **On-site Erection Date:** 2014
- **Panel Type:** StoPanel Classic ci

### Project Overview

The project was a remodel and addition to an old (circa 1977) hotel and casino in Las Vegas. The exterior scope consisted of in-place replacement and renovation of the existing structure and approximately 40,000 Sq. Ft. of StoPanel on the new structure.

### Job Requirements

The project required a non-drainage insulated exterior system, and StoPanel Classic ci was chosen as the most cost effective solution. Over 300 single-floor panels were developed. A combination of tower cranes and hydro cranes were used for the nighttime erection.

### Smart Solution

For years, insulated finish systems have been the go-to exterior enclosure for most projects along the Las Vegas strip due to their low cost and schedule effectiveness. Given the committed turnover date for this project and the delayed delivery of the steel framing, panelizing was the only and best solution.
